### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: The prior art fails to teach or fairly suggest the claimed invention as a whole including a cylinder liner which at least at one end is longer on the inner side in the axial direction than on the outer side and in that the transition from the inner side to the outer side is effected in the form of encircling, concentric steps, in the context of a cylinder crankcase comprising at least one cylinder liner which is integrally cast in the cylinder crankcase and runs in the cylinder crankcase from a cylinder-head side to an oil-chamber side, the cylinder liner having an inner side, which forms a cylinder tube, and an outer side, around which the cylinder crankcase is cast completely and directly. Note that there are several references, such as Woods et al (4,562,799), which show that the liner becomes successively narrower in several steps as shown in Figure 1, but the steps occur pretty much throughout the length of the liner, such that you could not say that the liner was longer on the inner side in the axial direction than on the outer side. Rather, the liner is pretty much the same length on both the inner and outer side except for the very bottom and this transition is accomplished by a slight taper.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
